## Core Competencies

DRIPS, LLC manufactures a heavy duty polypropylene barrier system (a sandbag replacement) with reinforced loops for heavy construction. Each system includes five 30 cubic foot capacity bags that open accordion style. Once the system is opened, it is self-supporting, allowing for easy fill techniques with a myriad of equipment such as front-end loaders, conveyors, etc. The bags can be connected to form a contiguous line, and stacked to achieve desired height specifications.

Product Highlights/Uses:

- **Highest UV rating on the market**
- **SWL 4,400 lbs. (6 to 1) Safety Factor/bag**
- **Ground Conforming**
- **Flood Barrier Protection**
- **Cofferdams**
- **Stream Diversion**
- **Erosion Control**
- **General Jobsite Protection**
- **Retention Ponds**
- **Secondary Containment Barrier**

## Differentiators

Our patented system is the most versatile easy-to-deploy barrier on the market. The product is reusable for many construction sites if used in conjunction with our patent pending Transforming Spreader Bar. The product is available in both "open-top", and "closed-top" for underwater uses.

Versatility, low costs, and fast deployment make Big Bags USA the most desirable product on the market.

## COMPANY DATA:

DRIPS, LLC a Missouri based limited liability company is the sole producer of "Big Bags USA" product in the United States. We own a 9,000 SF production facility and warehouse our product in various facilities to accommodate demand. See website for more details: [www.bigbagsusa.com](http://www.bigbagsusa.com)
